

Prasad Shashikant Kulkarni

Mobile: 7972771530/ 9880791416

Email ID: Prasadkulkarni491@gmail.com

Profile

6.5 years of experience in the IT sector with strong adaptability across multiple roles, including development and team leadership.

- Extensive experience across **Development, Implementation, Testing, and Analysis** of web-based enterprise applications.
- Strong expertise in **MERN stack development**, including ReactJS, NodeJS, Webpack, HTML, CSS, JavaScript, Bootstrap, and GraphQL.
- Hands-on experience with **Microfrontend and Microservices architectures**, building scalable, loosely coupled, and independently deployable solutions.
- Designed and maintained **reusable boilerplate code**, performed code cleanup, and managed environment-specific configurations to improve consistency and efficiency.
- Integrated **front-end with middleware and RESTful APIs**, including **JWT-based authentication** for secure communication.
- Implemented **unit and component testing using Jest**, improving code coverage and production stability.
- Strong debugging and troubleshooting skills across **microservices and micro-frontends**, ensuring seamless user experience and system reliability.
- Proficient with **Git-based version control systems** (GitHub, Bitbucket, SourceTree) for efficient source code and release management.
- Experienced in **Agile/Scrum SDLC practices**, collaborating closely with cross-functional teams.
- **Led and mentored junior developers**, handled task distribution, code reviews, and technical guidance as part of **team lead responsibilities**.
- Quick learner with the ability to adapt to emerging technologies; strong communication skills and a proactive team player.
- **Available for immediate joining.**

Professional Experience

SLK-Altimetrik (Team Lead)

September 2024 – Present

Responsibilities:

- Led a team of **11 developers**, managing task allocation, mentoring junior engineers, and ensuring timely delivery.
- Designed and developed **multiple web and mobile applications**, contributing hands-on across the full development lifecycle.
- Acted as a **Functional Lead**, handling client calls, conducting demos, and gathering and analysing functional requirements.
- Reviewed code from junior developers to ensure quality, performance, and adherence to best practices.
- Coordinated and managed **application deployments**, ensuring smooth releases and minimal downtime.
- Collaborated closely with stakeholders to align technical solutions with business needs.

Mouritech (Senior Principal Software engineer)

December 2020- July 2024

Responsibilities:

- Designing, coding, and debugging software.
- Improving the performance of existing software.

- Providing training to other engineers.
 - Maintaining and upgrading existing software.
 - Recommending new technologies that can help increase productivity.
 - Supervising and overseeing the technical aspects of projects.
-

E-zest solutions Pune. (Software engineer)

November 2017- November 2018.

Responsibilities:

- Develop flowcharts, layouts and documentation to identify requirements and solutions
 - Write well-designed, testable code
 - Produce specifications and determine operational feasibility
 - Integrate software components into a fully functional software system
 - Develop software verification plans and quality assurance procedures
 - Document and maintain software functionality
-

YUJ Designs (Design engineer)

November 2018- April 2019.

Responsibilities:

- Liaise with clients to identify their requirements
 - Investigate and undertake analysis on how to improve existing projects or components
 - Summarise scientific and engineering principles in an easy-to-understand manner
 - Write technical reports to summarise findings
-

Bitware technologies (IOT engineer)

May 2017- October 2017

Responsibilities:

- Write well-designed, testable code
 - Produce specifications and determine operational feasibility
 - Troubleshoot, debug and upgrade existing system
-

Skills Set

Web technologies	Web technologies. HTML., CSS JavaScript. Webpack JSON
Framework/libraries	React JS. Node JS. Redux. Graph QL.
UI framework.	Bootstrap and material UI.

Package managers	NPM, YARN
Database	MySQL
Source versioning	Git. GitHub. Bitbucket. Source tree.
State Management tools	Redux
Testing tools	Jest, React testing Library
Linting tools	ESlint Prettier
Log monitoring tools	New Relic, AWS Cloud watch
Programming languages	JavaScript. Python(Intermediate)
Code IDEs	Visual Studio code, PyCharm
Ticketing tools	JIRA, Kanban

Project Experience

Project name.	Radial UI kit.
Technologies	React. HTML. CSS. Bootstrap.
Project description: Radial UI Kit is a one-step solution for a development environment that is used as a playground for UI components. It allows the developer and test components in isolation. It is available in both NPM package as well as UI form to utilize it in your code.	
Responsibilities: Worked on designing and developing the components. Worked on testing of a component. Implemented unit test cases and improved code coverage using jest. Worked on documentation and design of a kit.	

Project name.	Equinox single app.
Technologies	React, NodeJS, GraphQL
Project description: Project is specially designed to feature world class personal trainers, group fitness classes and spas. The application has UI of weekly calendar to get the class information booked for the instructor. In this project, my job was to integrate new models as per requirements, API integration, writing unit test cases, performing enhancements and fixing the bugs which are reported by testing team.	
Responsibilities: Developed a web application using React framework. Implemented all data bindings, related functionality and complex iterations. Handled into end development. Improved code coverage using Jest testing framework.	

Project name.	Percipio
Technologies	React, GraphQL, Accessibility
Project description: Percipio is a premier educational training platform that develops comprehensive learning management systems. It prioritizes maintaining accessibility standards, ensuring the platform is available and usable for all types of users.	
Responsibilities: Spearheaded the entire development lifecycle, from planning and design to deployment and maintenance. Developed dynamic and responsive web applications using the React framework, ensuring a seamless user experience.	

Implemented GraphQL for efficient data fetching and state management, optimizing the application's performance. Focused on improving accessibility, ensuring the platform is usable by individuals with disabilities, adhering to WCAG standards.

Enhanced code coverage and reliability by writing comprehensive tests using the RTL testing.

Collaborated with the QA team to identify, troubleshoot, and resolve bugs, ensuring the highest quality and performance of the application.

Project name.	DP flow
Technologies	Node, React, MSSQL, sequelize
Project description: DP Flow is a web-based application designed to help vendors predict and configure the appropriate flow sensors and primary elements based on user-selected parameters such as pressure, temperature, pipe diameter, and fluid type. The application guides users through multi-step dynamic forms and generates graphical visualizations of the final selections to support informed decision-making.	
Responsibilities • Developed the application using React.js for the front end and Node.js for back-end services. • Designed and implemented multi-page form flows with dynamic validations and data handling. • Integrated APIs to process user selections and generate graph-based visual representations of results. • Reviewed code from junior developers, ensuring quality, performance, and best practices. • Wrote unit test cases using Jest to improve code coverage and application stability. • Handled database and application migrations, ensuring smooth transitions across environments. • Collaborated with QA and stakeholders to fix bugs, optimize performance, and improve user experience.	

Project name.	On Demand App
Technologies	Node, React Native, MSSQL, sequelize
Project description: The On-Demand Appointment Scheduling App is a mobile application for sales counselors that enables them to schedule and manage customer appointments for new home projects across multiple locations in the USA . Similar to an Uber-style experience , the application provides map-based navigation , displaying scheduled appointments for contacts, prospects, or realtors and guiding users to the respective project locations in real time.	
Responsibilities • Acted as Technical and Functional Lead, driving end-to-end delivery and stakeholder coordination. • Developed core mobile features and translated business requirements into technical solutions. • Mentored junior developers, conducted code reviews, and ensured coding standards. • Wrote unit test cases, resolved SonarQube issues, and improved code quality and maintainability. • Managed deployments, collaborated with QA, and optimized application performance and stability.	

Project name.	Hussman Club App
Technologies	Node, React Native, MSSQL, sequelize
Project description: It is a global Refrigeration IoT Control System , a mobile-based Internet of Things (IoT) application designed to monitor, control, and optimize refrigeration units deployed across multiple locations worldwide. Similar to an Uber-style real-time tracking experience, the application provides a centralized dashboard with map-based visualization, displaying the live status and geographic location of all connected refrigerators.	
Responsibilities • Sole developer and Individual Contributor, owning end-to-end design, development, and deployment of the IoT-based refrigeration mobile application. • Built core features for real-time monitoring, remote temperature control, alerts, and global tracking. • Translated business requirements into scalable technical solutions with IoT-cloud integration. • Ensured code quality through unit testing, SonarQube fixes, and performance optimization.	

Bachelor of Engineering (Electronics and Telecommunication)

KIT's College of Engineering, Kolhapur.
